

Tomorrow Is the Glorious Fourth! BETTER CELEBRATE!

The boys that will have the most fun, make the most noise, with no danger to themselves or others, are those who use the Winchester 10-gauge cannons we have sold. They are worth \$6.50 now; better get one.

We carry blank cartridges—22, 32, 38 and 44 calibre; also have plenty of fresh black powder of the best grade. Hazard make, just received.

Cheap, trashy pistols for Fourth of July sale only we do not carry. They are dangerous. Our prices on standard pistols \$15 to \$35.00. In the Iver Johnson and Harrington & Richardson makes, about half what you can buy them for elsewhere.

Perhaps you have been waiting for the Fourth in order to go hunting or fishing. If so, don't neglect engaging your gun early. Our stock of ammunition and fishing tackle is first class.

DATE ORCHARD NEWS Installation of Pumping Plant at Tempe—The Yuma Experiment.

Prof. R. H. Forbes of the Arizona experiment station came down last night from Tempe, where he has just finished making improvements approximating in value \$2,500 at the Tempe date orchard. These improvements consist in the erection of a nice four-room dwelling house for the resident workman, who has charge of things in his absence, and the installation of a 12-horsepower Fairbanks-Morse gasoline pumping plant. The plant was tested yesterday morning and threw fifty inches of water from two 12-inch tubular bored wells on the tract. This plant is to be used for irrigation, and especially for any emergency that results in a shortage of the supply of ditch water.

The original fifteen-acre tract is now almost entirely planted to date trees, six acres of which are now beginning to bear. With this year's crop the orchard at six years from the first large plantings begins to yield substantial returns. Mr. Forbes intends this year to make a market test of the product of the orchard, which hitherto has been almost entirely used for exhibition purposes. From this time on the crop will probably double in size annually, as additional trees are bearing.

Mention was made a few days ago of another orchard that has been planted, near Yuma, under the direction of the experiment station. This experiment, said Prof. Forbes last evening, is on the basis of experience gained at Tempe, and is for the purpose of multiplying the most promising varieties discovered at Tempe and elsewhere. The land for the Yuma orchard was donated by C. T. Townsend of Yuma, and is a beautiful tract of alluvial loam in the Colorado river bottoms, one mile from Yuma. The tract is divided into large lands. Date trees are set along the borders of each land, and alfalfa is planted between. The purpose of this experiment is to illustrate how a farmer might raise good crops of alfalfa on a certain piece of land that, for illustration, is valued at a hundred dollars an acre, and in from six to ten years, while so engaged, might develop a date orchard on the same land that would finally make it worth a thousand dollars per acre.

The Tempe orchard was a scientific rather than a business experiment. It was started on an alkaline tract of land of the most forbidding character, while the Yuma orchard is in the most favorable location that can be imagined. The Tempe orchard is particularly valuable in demonstrating a use for large areas of alkaline land that are worthless for other purposes. The Yuma orchard, therefore, will probably surpass it as a commercial proposition, partly because of its more favorable location and partly because there are fewer varieties planted, and only the best of them will be propagated. The Tempe orchard, by the experiments conducted, has made the Yuma orchard a practicable experiment, the result of which can be taken as a basis of operations by those who desire to begin date culture as a business rather than as a novelty, or as a good crop on good land rather than a date crop on land worthless for anything else.

YAVAPAI COUNTY.

Lloyd C. Haynes of Broad street, New York City, has secured a bond on the Hassayampa group of mines at Jerome. The claims are extensions of Senator Clark's United Verde mine. Mr. Haynes visited his property the past week in company with D. N. Bartholdi, the original owner of the property. On his return to his New York home Mr. Haynes stopped in Chicago and purchased a complete diamond drill outfit for use in the development of his mines, and this machinery has already been shipped and will be placed on the ground as soon as it arrives, but actual operations may not begin for several weeks, on account of the company being unable to send a competent man to place the machine in commission and operate it at once; but the drill will be put to work as soon as possible, and every claim in the group will be worked and thoroughly explored. Work must be started within ninety days under the existing bond, but before half that time has expired operations on the property will be under good headway. Mr. Haynes gave Mr. Bartholdi instructions to go ahead and make all preliminary arrangements for the putting to work of the diamond drill as soon after its arrival as possible. Mr. Haynes has retained Mr. Bartholdi as superintendent.

A whim has been placed on the Pitts mine, also at Jerome, and deep mining

MINES AND MINING

Things Going on Under Ground in Various Localities.

has commenced in good earnest. This is one claim in the group under bond to a Biscoe company.

The entire force of men at work on the Bonnie mine suspended operations and came into Prescott last evening for fourth of July celebrations tomorrow. They reported that the mine was looking well and work was progressing finely.

YUMA COUNTY.

It is reported that the cyanide plant at the old Fortuna mine, near Yuma is being removed to Fairbanks, in Cochise county, where it will be used in the operation of another mining property. The work of removal is being superintended by Sam Anderson.

GRAHAM COUNTY.

A wonderfully rich gold discovery has been made lately in a prospect at Steeple Rock. The mine is about eight inches wide and reported to be fabulously rich. The claim has been worked for several years and has an immense quantity and tonnage of low grade ore on the dump, but this rich discovery is something new and is a surprise to the owners, who are much elated over the discovery.

UNCLE SAM'S BIRTHDAY DINNER should be the best that can be provided and if it is celebrated in a prime rib or porterhouse roast of beef, or a leg of delicious mutton or veal it is certain to be enjoyable. For midsummer there is nothing that is so dainty and appetizing as veal and we eat from the very best that is raised. Our choice country fed poultry is fat and toothsome.
